Newsletter

February 2018 Issue 9

Dear HDClarity Teams!

Thank you to everyone for all of your hard work, we have now completed 105 sampling visits and 41 repeat sampling visits!

Special thanks to Wake Forest University, Cambridge University and University Hospital Erlangen who have now completed their SIVs and will soon be recruiting.

! SAMPLE PROCESSING REMINDER

It is essential that your pipettes are accurately calibrated and set to the required value set out in the protocol.

Please fill all **CSF cryovials to 300microL** and all **Plasma cryovials to 300microL**. If there is excess sample that is not enough to fill a vial to 300microL then you can dispose of it.

Please fill one **serum cryovial to 1500microL**, then fill the 2nd serum cryovial with up to 1500microL. When you have filled 2 x serum cryovials with 1500microL then you can dispose of any excess. It is not necessary to keep more than 1,5+1,5mL of serum.

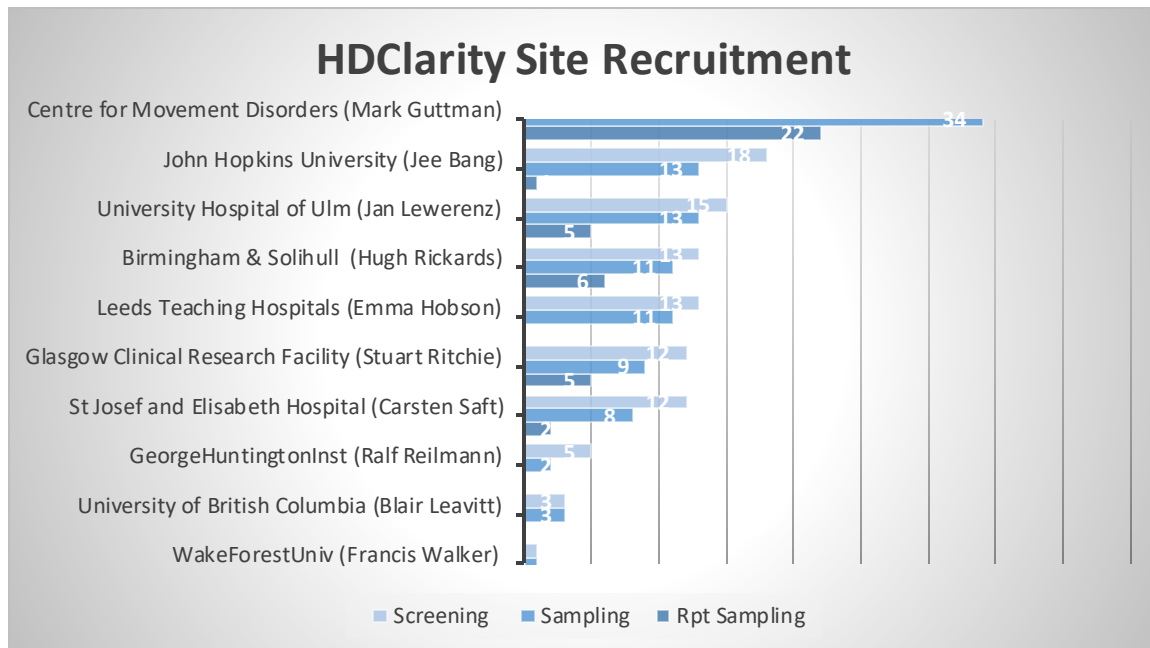

! SHIPMENT

Please remember to send a shipment notification via the EDC as soon as you have arranged a shipment with the courier.

The Lab ID must be written on the front of every biohazard bag with permanent marker pen as this is BioRep's way of identifying samples.
