4 Nations Participating

13 Clinical Sites Worldwide

261 Participants

Dear HDClarity Teams!

Thank you to everyone for all of your hard work, we have now completed 230 sampling visits and 81 repeat sampling visits!

*The chart reflects recruitment data of initiated sites extracted from the HDClarity EDC to date (31st May). Any data not yet entered on the EDC will not be shown here.

Recruitment by HDClarity Category

| Completed Initial Sampling Visits | | | | | | |
|-----------------------------------|-----------------------|---------------------|------------------------|------------------------|----------|-------|
| # Early Premanifest HD | # Late Premanifest HD | # Early Manifest HD | # Moderate Manifest HD | # Advanced Manifest HD | Controls | Total |
| 31 | 53 | 80 | 9 | 9 | 48 | 230 |

We would like to ask all sites to focus on recruiting healthy controls to the initial sampling visits please. We currently need to prioritise recruitment to this group, until you hear otherwise from Central Coordination.

! IMPORTANT !

Sample Processing Information

Please freeze all samples upright, in the dry ice and/or the freezer. Vials that are frozen upside down look empty when they arrive at BioRep because the samples become hidden behind the label. BioRep then need to weigh individual vials to investigate whether they are indeed empty or not. For the same reason, we also ask that you dispose of all empty vials and do not ship these to BioRep.

Please contact UCL Central Coordination if you have any questions hdclarity-cc@enroll-hd.org
